Acoustical Wall Panels - Tackboards - Baffles

## Featured Product

### Accutrack Midwall System

Accutrack Systems has been supplying acoustical, fabric-wrapped panels since 1985. During this time we have made numerous improvements to both our products and our installation techniques.

One of the most important enhancements has been our patented **ACCU-SNAP Fastening System**.

Shown above is an installation designed by Leonard Design Company for Invesco offices in Atlanta, Georgia. The ACCU-SNAP fastening system enhances such an installation in several ways.

Installation of the panel system ON SITE enables us to conform to exacting tolerances and produce a high quality panel installation, even on building conditions where walls and ceilings are out of square. Fabrics can be easily removed and new fabric replaced on the system, or the entire panel system can be removed and installed in a totally separate area if the need arises. This flexibility allows for a long life span of the system and adds value to the client's initial investment.

With this system, Accutrack offers the defining solution to not only perfect panel joints, but to a fastening system that simplifies the installation and removal of our panels. The Accutrack Midwall System is so much more reliable than any of the friction fit systems on the market that we offer a FIVE YEAR warranty against any panel defect, including sagging of the fabric. Clean, crisp edges and joints. Quick and easy panel removal for repairs or fabric change. Specify this one-of-a-kind wall panel system for a problem-free installation. We guarantee it.

Accutrack is available in thicknesses of 1/8", 3/8", 1/2", 3/4", 1", 1 1/8", 1 1/2", and 2". Edge profile options are Square, Radius, Bevel or Chamfer. Contact us today for more detailed information or go to [www.accuracksystems.com](http://www.accuracksystems.com).
