Acoustical Wall Panels - Tackboards - Baffles

Project Snapshot

Hilton Branson Convention Center

Accutrack Systems has been supplying acoustical, fabric-wrapped panels since 1985. During this time we have worked with some of the largest design and construction firms in the country.

Today, we are featuring one of our recent projects which shows the broad capabilities of our product and skill of our installation teams on a large hospitality project. The photo at top right is of a ballroom at the **Hilton Branson Convention Center** in Branson, Missouri.

The architects at TVSDesign in Atlanta used a number of different fabrics and panel shapes to create a warm, inviting space. The playful “bird” light fixtures and extensive color options for the lighting allow this multi-purpose space to adapt to the event planner’s requirements.

- In this detail photo of the panels above the doors, you will see the “birds” created using subtly contrasting fabrics and the Accutrack panel system. This ties into the bird motif of the custom lighting in the space.
- Accutrack can create virtually any shape you can imagine using our highly trained installers working on-site with track system.
- Accutrack works with the designer to create shop drawings, mockups and submittal samples to ensure the design intent is met after installation.
- Contact Accutrack Systems today to see how we can help you create the space you’ve imagined for your client.

The photo above shows a meeting room in the same complex using Accutrack panels to create visual interest while achieving excellent acoustical performance. Note the custom lighting surrounded by wall panels.
