Acoustical Wall Panels - Tackboards - Baffles

Project Snapshot

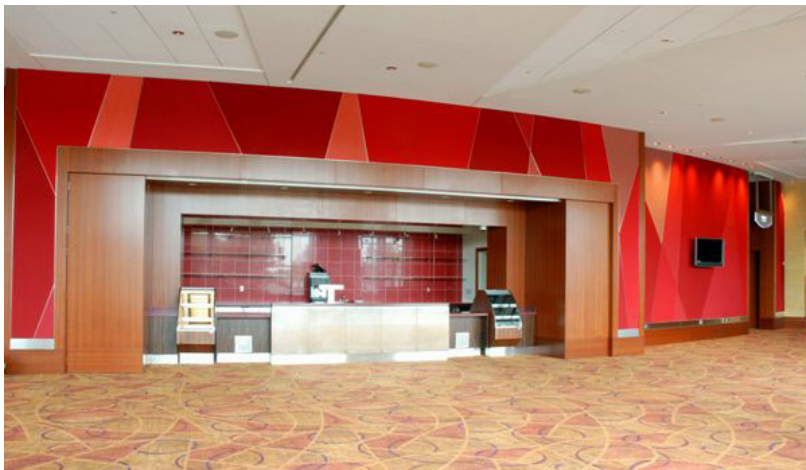

Cobb Energy Performing Arts Centre

Accutrack Systems has been supplying acoustical, fabric-wrapped panels since 1985. During this time we have worked with some of the largest design and construction firms in the country.

Today, we are featuring one of our recent projects which shows the broad capabilities of our product and skill of our installation teams on a large public space. The photo shows a ballroom entrance at the **Cobb Energy Performing Arts Centre** in Atlanta, Georgia.

The architects at Smallwood, Reynolds, Stewart, Stewart in Atlanta used a number of different fabrics and panel shapes to create an elegant environment for the performing arts. The use of acoustical fabric panels in various shapes and with different fabrics inset into wood surrounds creates a striking asymmetrical look.

The photo above shows a concession area where more dramatic colors and shapes reflect the purpose of the space.

- In this detail photo of the panels adjacent to the ballroom door, the use of a metal reveal defines the pattern of two fabrics.
- The clean lines and unique shapes are easily accomplished using Accutrack's patented ACCU-SNAP fastening system. Should a panel be damaged in the future, the fabric may be easily replaced without special tools - a key feature of the Accutrack system.
- Accutrack works with the designers on such projects to create shop drawings, mockups and submittal samples to ensure the design intent is met after installation.
- Contact Accutrack Systems today to see how we can help you create the space you've imagined for your client.
